

CERDAAC Calibration Management

SIMCO's CERDAAC® cloud-based quality execution system provides complete calibration and maintenance program management. Widely used by leading life science and technology organizations, CERDAAC creates a secure, paperless calibration workflow that reduces costs, improves operations, & supports FDA compliance.

Business Challenge

How do you maximize manufacturing quality and productivity while minimizing calibration complexities and downtime?

CERDAAC Calibration Management Solution

- Reduce costs and increase quality by properly managing all elements of your calibration program
- Continually improve your calibration program through KPI driven program management
- Support compliance with automated workflows and archived service records

Calibration program dashboard displaying KPIs

FEATURES AND BENEFITS

Calibration Program Management:

- Comprehensive calibration management based on 55 years of industry leadership
- Automate all aspects of calibration workflow
- View service history and status for any asset
- Create custom work-orders and certificates
- Track technician performance & workload
- Track turnaround time performance
- Minimize program risk and costs by properly managing OOTs and false non-conformities
- View trending data through eForms to analyze calibration/adjustment frequency

Service Scheduling:

- Ensure calibration compliance by automating calibration service scheduling
- Plan and schedule calibrations to fit manufacturing and other requirements
- Automate notifications of upcoming and services due with escalations
- Track service time performance
- Trigger services by cycle count, hours, & date

Digital Procedures:

- Save time and eliminate human error risk by linking procedures directly to services
- Upload and store digital procedures or access through URL for procedure document control

Service Records:

- Online storage of all service data
- Audit trails & consolidated audit trail report
- Digitally authenticated records
- Software validation available with optional Compliance Module

External Vendor Management:

- Reduce duplicate data entry and human error
- Upload & view service provider documentation
- Provide 3rd party vendors limited access to view and perform services

Standards Traceability:

- Designate assets as standards to link automatically to calibration service record
- Maintain forward and reverse traceability

Dashboards & Reports:

- Executive dashboards display real-time program KPI analytics for decision making
- Extensive pre-built reports to uncover program bottlenecks and streamline operations
- Report builder for personalized analytics
- Automate knowledge dissemination through report scheduling, email, and export
